

Cloud-based mobile testing

Easy to use mobile test automation based on the open WebDriver standard

Mobile apps define how customers and employees interact with organizations and brands. Mobile app testing is key for organizations worldwide when building lasting connections with their audience.

Teams across the world use Quamotion to test mobile applications, and ensure they deliver the mobile experience users love.

Built on top of the open WebDriver standard, teams can now manage their end-to-end iOS and Android application testing from a single portal, using their preferred hardware—be it a Windows or Linux PC or a Mac.

Benefits

Deliver five star apps to your customers

Mobile Testing

Deliver top notch applications by finding bugs in your application before your users do. Using Quamotion's mobile testing solution, stop losing customers because of quality issues.

Do more with less

Mobile Test Automation

Save money, resources and time by automating the tests of your mobile application. Write your tests once and run them on as many devices you need to—ensuring your app has been tested on all the devices your customers use.

Buy fewer devices

Cloud Scale Out

Run your tests on as many devices as you need. Choose from over 500 real, physical iOS and Android devices and Genymotion emulators in **Quamotion Cloud**. Use emulators for high scalability and real, physical devices to test the app on end-user devices.

Stay on top

Reporting

Is your app ready to go? Did you test your app on all the devices your customers will use? Don't guess, but rely on reports. With its rich, built-in reporting capabilities, you can be confident that your app meets your business requirements.

Features

Test apps and websites on iOS and Android emulators, local devices and cloud devices

Test iOS and Android apps on emulators, physical devices that are connected to your PC using a USB cable, or devices that are managed for you in the cloud. You can even test iOS apps on real devices using your Windows or Linux PC!

Automate in your preferred language

Why learn a new scripting language? You can automate your app using Java, C#, PowerShell or any other language, no matter which language the app was written in.

End-to-end Automation

Application Automation: Automate end user interactions such as tapping or swiping and validate what's displayed on screen

Device Automation: The app is resigned, installed and launched automatically. No more fighting with code signing!

Evidence Gathering: Gather evidence such as screenshots and device logs, while your app runs

Robust Object-Based Technology

Object-Based technology unlocks all user interface controls. Access the full hierarchy of controls, and uniquely identify each control. Work with standard and custom frameworks, such as Cordova, React Native or Xamarin.

Complete Reporting

Through our intuitive front-end, you get access to a comprehensive quality cockpit, from which you can access dashboards and test logs.

Pricing

Light

- Community support
- Test on up to 4 **local devices**
- No cloud access

EUR 295 / month

Flex

- **Dedicated support**
- Test on up to 4 local devices
- 10 hours of cloud scale out

EUR 495 / month

Cloud: Emulator

- Dedicated support
- Test on any of over 100 configurations of **Genymotion** emulators in the cloud

EUR 295 / month / concurrent device
